

The 7.62x51 mm ARSENAL Machine Gun **MG-M2S** is a modern version of the PKM, a powerful automatic weapon used against enemy troops, vehicles, and reinforced structures. Comparable to the U.S military medium machine gun, the M240B and M240G, the MG-M1 is considerably lighter (approx. 7 lbs.), but fires the same standard NATO 7.62 round. Considered one of the most reliable machine guns still in service throughout the world, the MG-M1 is an overall excellent choice for firepower. This model comes standard with the Bi-Pod and Tripod.

Main Features:

- Chrome lined, cold hammer forged barrel providing an extremely durable and long-lasting barrel that also allows for use of corrosive and surplus ammunition if needed
- Modern design of the Flash Suppressor-Compensator.
- Butt and Hand guard, made of high quality and resistant glass fiber reinforced polycapromide, not effected after heating by direct sun light, corrosion and humidity resistance, light and firm.
- Feeding cartridges is done by a disintegrating metal belt, consists of metal links M13 type, put in a box of capacity 100 or 200 cartridges.
- Spare barrel – for changing out when overheating during combat or training
- Includes the Arsenal Tripod that can also be converted to free swinging to engage aircraft.
- Fixed Rail on the receiver cover, that provides attachment of Sight Carrier with Rails acc. to MIL 1913 (Picatinny).

Extras (Paid Separately):

- blank firing attachment - set (bushing & frame);
- rail for sighting devices;
- Additional ammo boxes;
- Additional spare barrel (each unit comes with (1) spare barrel to start);
- Repair kit and Armor kit packages available

7.62x51 mm NATO ARSENAL Machine Gun MG-M2S

SPECIFICATIONS	MG-M2S
Calibre, mm	7.62 NATO
